

ABSTRACT

In an integrated type video reproducing equipment having a reproducing unit for reproducing the video information, a display unit for displaying the reproduced video information, and a chassis for supporting them, the equipment is provided with supporting means for supporting the displacement of both the units, and fixing means for fixing the displacement so that both the units are able to displace in a predetermined direction and to fixe and house in a predetermined position. Thus, there is provided a small-sized video reproducing equipment which is superior in the operability and visibility when in use as well as in the housing efficiency when housed.
